The Problem?

Promotional companies have sold billions of these cheap reusable bags that they bought for next-to-nothing, convincing everyone from corporate America to mom & pop shops that they're being "green" by offering these bags. So why are they so bad?

- The material is not a real fabric, it is a plastic fiber (polypropylene) manufactured to look like it's woven (hence the name "nonwoven" polypropylene) and because it is thicker than a plastic bag it will take longer to biodegrade.
- The material rips easily and is only supposed to be hand-washed in cold water, wearing out quickly when washed in the high water temperatures needed to kill bacteria.
- WORST OF ALL: There are virtually NO recycling centers that will recycle them!

The Solution:

CRESBI crates from Sun Sugar Farms!

- Durable, even if you break one a CRESBI crate can still store stuff.
- Dishwasher safe - able to handle the hot temperatures needed to kill bacteria.
- Tons of packing power: one crate can replace up to 6 plastic or small reusable bags, depending on what you're buying.

RECYCLE YOUR REUSABLE BAGS HERE!

To help keep nonwoven polypropylene bags out of landfills, Sun Sugar Farms is offering a credit program! Give us your bags to weave into rugs or other useful items and we will give you a nickel credit per bag towards your next CRESBI crate purchase!

- Mail your clean nonwoven polypropylene bags to:
Sun Sugar Farms Corporate Headquarters
1258 Maddox Lane, Verona KY 41092
Or call 888-883-7259
- Include your name, phone, email address & number of bags when you drop off.
- We'll email you a code to use towards the purchase of a CRESBI crate system for the total amount credited (\$0.05 credit per bag).
